

The 3741 Shot/Hammer throwing circle form is a four part bolt together form that is adaptable for a variety of in-ground installation practices. Drainage can be incorporated. Aluminum exterior bracing creates a strong frame yet leaves the center open for the smoothest pour and crack-resistant finish. Outer frame is 2" x 3" aluminum angle, inner circle is 1/4" x 3" Aluminum flat bar.

Hardware List:

- (8) 5/16" Plated Wing Nuts
- (8) 5/16" x 1 1/4" Bolts
- (16) 5/16" Plate Flat Washers

- 1) Arrange four quadrants to form inner circle, oriented in accordance with architect's specs.
- 2) Bolt the form together using the supplied hardware through the slotted angle pieces. Tighten down until snug, and frame becomes rigid.
- 3) Check inner circle sits flush at joints with smooth transitions. Adjust form if necessary.
- 4) Measure diameter of circle front (facing sector) to back (facing cage) and check for correctness as according to the governing organization (NFHS, NCAA, IAAF). Diameter must be 84 1/16" +/- 3/16"
- 5) Mark interior surface of circle 3/4" from top edge. This is your fill line. Inner fill must be 3/4" +/- 1/16" from top edge.

6) Outer pour should be flush and level with exterior edge, or to the required level for an artificial surface. Inner pour should be level, 3/4" from the top edge of the frame.

*Holes in exterior side walls allow for attachment to additional removable forms if desired.

SECTION B-B
SCALE 1 : 32

*Drainage pipe may be secured on underneath side of form through secondary slots/holes in 1" angle braces. If incorporating drainage in interior of circle, we recommend that the drain is level or slightly depressed from finished surface and is no larger than 1", and is placed along left or right wall as to be least intrusive to the athletic competition.

It is important to read all instructions before beginning installation. NOTICE: All installations should be conducted by experienced contractors and in accord with all applicable code, laws, and regulations.
